

Tough Panel™

Unique Features

Wide Range of Data Entry Tools

The Toughpanel also comes with a wide range of data entry tools to allow an operator to easily enter both text or numeric data.

- A pop-up ascii keyboard, allows operators to enter part numbers and/or leave messages on the panel for another operator.
- A pop-up numeric keypad allows operators to set passwords, reset set-points and other data variables.
- Don't like numeric keypads, no problem, we also support pop-up thumbwheel switches, just like those old mechanical one's.

POP-UP Keypad allows you to enter data into a pre-defined PLC register.

POP-UP Electronic Thumbwheel emulates a mechanical thumbwheel switch.
